Contact your local security dealer or GE sales representative for product recommendations that best suit your specific application.

With five core products and countless peripheral options, working with GE Security means every type of application is covered.

Allegro

For multi-unit applications, Allegro installs quickly and delivers high-quality performance. Equipped with the Dialog™ Telephone Interface Module (DTIM), Allegro's battery-operated communication link can still report to your central monitoring station even if the panel is damaged during a break-in or fire. Complete with built-in keypad and siren that is capable of 85 dB, Allegro is the ideal solution for smaller residential spaces.

Concord™

Concord offers powerful, expandable security that is easy to install and simple to use. Featuring Learn Mode technology and a modular design, Concord provides outstanding flexibility in a full-featured security system for intrusion, fire detection, carbon monoxide, temperature extremes and medical emergencies. For small to large homes and retrofit applications, Concord is an ideal fit.

NetworX™

Seamlessly integrating multiple security components, the NetworX system delivers optimum security for single-family homes. Particularly well-suited for new construction, NetworX offers a wide selection of hard-wired security elements including keypad, motion sensors, glassbreak detectors, smoke detectors and magnetic contacts. Complete with cellular back-up and complementary with wireless components, NetworX represents one of the most advanced and reliable security solutions available.

From rental and condo spaces to small homes to residences exceeding 10,000 square feet, GE Security's solutions are designed with a constantly changing marketplace in mind. Our modular-based wired and wireless controls and peripheral sensors are just the beginning of a wide selection of components that install easily and perform reliably. GE Security products also offer another valuable benefit—the reassurance that comes from one of the most experienced and advanced security providers in the world.

Multi-Unit

Securing unit-based housing such as apartments or condominiums is something for which GE Security solutions are particularly well suited. Installation time is short through an efficient process that keeps disruptions to a minimum, complemented with reliable, wireless technology that is ideal for this home environment.

Small Home

For effective, full-featured security designed for smaller homes, GE Security intrusion products more than fill the bill. Individual security zones, combined with structured wiring and wireless functionality, make it easy to customize a security system that meets your specific needs.

Large Home

Larger homes, in addition to traditional security requirements, may also involve extensive system installation. GE Security makes sure that seamlessly integrated components keep your overall solution simple and easy to use while comprehensively addressing other home systems, including HVAC, lighting, energy consumption and more.

New Construction

If you are constructing a new home, GE Security offers some of the most innovative solutions available for residential security. These include structured wiring products that provide you with the best security solutions to ensure your home is built to meet all your security needs.

Retrofit

For existing homes that require a retrofit security solution, GE Security's wireless products are an exceptional and effective intrusion prevention option. Scalable, customized and integrated, these security components install quickly and minimize the disruption and drilling associated with hard-wired systems.

Smart ConnectionCenter™

SmartCom™ combines attractive home amenities—multi-room audio and intercom—and integrates them into one system that is both attractive and user-friendly. With SmartCommand™ you can enjoy the simplicity and convenience of a color touchscreen together with a powerful home control system. The touchscreen displays information on an easy-to-use interface to control various home comfort systems including thermostat, intrusion panels, lighting and audio. Fully scalable and easy to install, SmartCommand puts complete control of your home environment literally at your fingertips.

The Smart ConnectionCenter™ conveniently and effectively brings technology to every room in your home. From video camera monitoring to telephone to home control systems, the Smart ConnectionCenter's structured wiring and connectivity solution helps manage all aspects of home life.

Simon

Representing the next generation of wireless, self-contained platform home security, Simon is a cost-effective security solution that is ideal for small houses, apartments and condominiums. Quick and easy to install, Simon is up and running in minutes. Designed with modern homeowners in mind, Simon provides convenient features including remote monitoring, email/phone notifications and hands-free audio communication.

Peripherals

GE Security's full line of intrusion protection solutions is complemented by a large selection of peripheral components that can enhance your home's security. Wireless and hardwired sensors are compatible with all products, including the new slim-profile DesignLine sensors. In addition, cellular-based communication modules are also available so that your system can be monitored and remote controlled with a cell phone or PDA. These added security elements represent GE Security's commitment to comprehensive security and protection:

- Door/window sensors
- Motion detectors
- Magnetic contacts
- Wireless smoke and CO detectors
- Keypads and keyfobs
- Glassbreak and shock sensors
- Wireless quick-bridge receivers and repeaters
- Cellular-based communication modules
